

# Bluff Street Interchange Project

Information Sheet  
Summer 2007

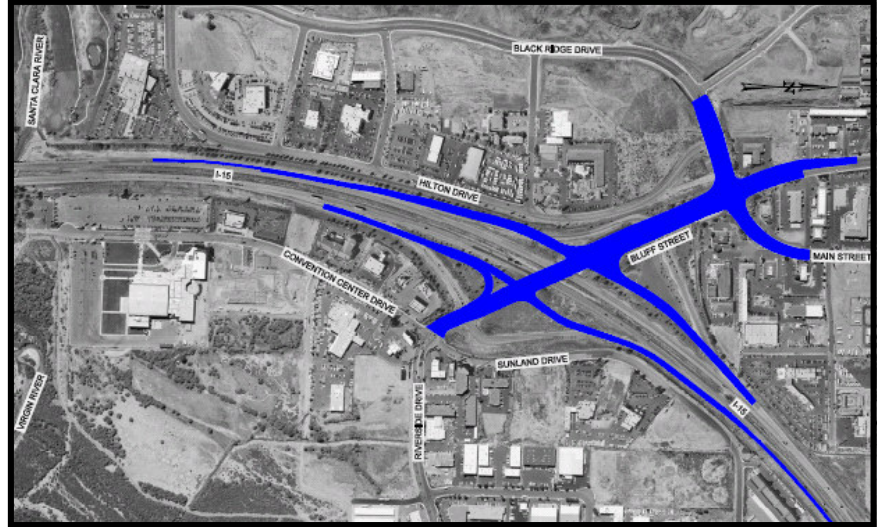

## Project Overview

The Utah Department of Transportation is currently designing improvements to the Bluff Street Interchange at I-15 in St. George, Utah. The design plans for this project will include the following improvements:

- Realignment of the I-15 access ramps to increase intersection spacing
- Minor widening of Bluff Street and the bridge crossing I-15
- Intersection improvements at Black Ridge/Main Street and Bluff/Convention Center Drive/Sunland Drive/Riverside Drive

The purpose of this project is to improve traffic flow on Bluff Street and the operation of the I-15 interchange. At this time, conceptual options for the realignment of Hilton Drive with an access to Bluff Street are being evaluated. The City of St. George is seeking additional funding for this and other improvements in the interchange area (i.e. detention basin and a trail crossing underpass).

For further information on project progress and a schedule of upcoming activities please visit the project web site at [www.udot.utah.gov/bluffstreetinterchange](http://www.udot.utah.gov/bluffstreetinterchange).

## Project Schedule

Project Design	January 2007 through Fall 2007
Advertise the Project	Fall 2007
Construction	Early Spring 2008 through Summer 2009*

\*Dates are tentative and subject to change.
